

GENERAL INFORMATION

CORDLESS CONCRETE NAILER (CCN)

Gas-Free Fastening System

INTRODUCTION

The 20V MAX* Cordless Concrete Nailer is an operationally gas-free fastening system designed for use in concrete, concrete masonry block and steel applications. Running on only a DEWALT 20V MAX* battery, this tool eliminates the need for fuel cells and powder loads. It provides a productive and powerful fastening solution with no licensing requirements, and can operate on the user's existing DEWALT battery platform. This system is ideal for commercial framing and track installation, light gauge mechanical and electrical installations, and can be considered for insulation, lathing and other surface prep applications. Stick-E assemblies are specially designed components for various fastening attachments into concrete, concrete masonry block and steel.

GENERAL APPLICATIONS AND USES

- Attaching light gauge steel track to concrete, concrete masonry block (CMU) or steel
- Attaching mechanical clips and fixings to concrete, concrete masonry block (CMU) or steel
- Attaching plywood to concrete or concrete masonry block (CMU)
- Attaching lath to concrete, concrete masonry block (CMU) or steel
- Attaching furring strips to concrete or concrete masonry block (CMU)

FEATURES AND BENEFITS

- + Gas-free operation and no licensing requirements
- + Field-serviceable driver blade and tool-free, interchangeable nosepieces
- + Adjustable power settings, low noise and recoil levels
- + Comparable application speed to gas concrete nailers
- + Dual LED lights illuminate work surface and provide tool diagnostics
- + Can be mounted on a pole tool
- + 600 shots per battery charge (see tool specifications section)**

APPROVALS AND LISTINGS

- International Code Council, Evaluation Service (ICC-ES), ESR-4076
- Code compliant with the International Building Code/International Residential Code: 2018 IBC/IRC, 2015 IBC/IRC, 2012 IBC/IRC, and 2009 IBC/IRC
- Tested in accordance with ASTM E1190 and ICC-ES AC70 for use in concrete, lightweight concrete, concrete over steel deck, concrete masonry and steel

GUIDE SPECIFICATIONS

CSI Divisions: 03 15 00 - Concrete Accessories, 05 05 23 - Metal Fastenings, 06 05 23 - Wood, Plastic and Composite Fastenings, 09 22 16.23 - Fasteners. Power-driven fasteners shall be CCN fasteners as supplied by DEWALT, Towson, MD. Fasteners shall be installed in accordance with the published instructions and the Authority Having Jurisdiction.

TOOL SPECIFICATIONS

Tool Model	DCN890B DCN890P2	DCN891B DCN891P2
Tool Width	4"	4"
Tool Length	15.25"	15.25"
Tool Height	16.25"	15"
Tool Weight (Bare, without battery)	9.35 lbs	8.9 lbs.
Pin Length (Range)	1/2" to 2-1/4"	1/2" to 1"
Pin Capacity	33	33
Approximate Shots per Battery Charge**	600	600

For 20V MAX Maximum initial battery voltage measured without a workload is 20 volts. Nominal voltage is 18.
 **With 5.0Ah battery pack (driving 0.102" diameter shank, 3/4" long fasteners into concrete)

STICK-E ASSEMBLIES

SUITABLE BASE MATERIALS

- Normal-weight concrete
- Lightweight concrete
- Grouted concrete masonry (CMU)
- Hollow concrete masonry (CMU)
- Steel

PERFORMANCE DATA

Allowable Loads for CCN Fasteners Driven into Normal Weight Concrete^{1,2,3,4,5}

Shank Type	Shank Diameter (inch)	Minimum Embed. (inch)	Minimum Spacing (inch)	Minimum Edge Distance (inch)	Minimum Concrete Compressive Strength (f'c)							
					2,500 psi		3,000 psi		4,000 psi		6,000 psi	
					Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)
Straight	0.102	3/4	4	3-1/4	155	155	175	175	195	170	-	-
			4	2	125	135	145	155	140	170	-	-
	0.145	3/4	4	3-1/4	125	125	145	145	140	180	-	-
			4	2	120	125	140	145	140	180	-	-
Tapered	0.120	5/8	3-1/4	3-1/4	150	120	170	135	170	145	75	135
			2-3/4		150	120	170	135	165	135	75	135
			2		150	90	170	100	160	100	75	95

For Sl: 1 lbf = 4.48 N, 1 inch = 25.4mm, 1 psi = 6.895 kPa

- Fasteners must not be driven until the concrete has reached the tabulated compressive strength.
- Concrete thickness must be a minimum of 3 times the embedment depth of the fastener or 2 inches, whichever is greater. Consideration of smaller spacing and edge distances may be given based on application or jobsite testing.
- The tabulated allowable load values are for the fastener only. Wood or steel members connected to the steel substrate must be investigated in accordance with accepted design criteria.
- Allowable load capacities are calculated using minimum required safety factors in accordance with ICC-ES AC70; the applied safety factor for the tabulated allowable loads is 5.0. Consideration of additional safety factors may be necessary depending on the application such as life safety.
- Multiple fasteners are recommended for any attachment for increased reliability.

Allowable Loads for CCN Fasteners Driven into Minimum 3,000 psi Sand-Lightweight Concrete and Sand-Lightweight Concrete over Steel Deck^{1,5,6,7,8}

Shank Type	Shank Diameter (inch)	Minimum Embedment (inch)	Installed Directly into Concrete ²		Installed Through 3-inch Deep Steel Deck Panel into Concrete ³				Installed Through 1-1/2-inch Deep Steel Deck Panel into Concrete ⁴				Top Cover (inches)
			Tension (lbs)	Shear (lbs)	Tension (lbs)		Shear (lbs)		Tension (lbs)		Shear (lbs)		
					Upper Flute	Lower Flute	Upper Flute	Lower Flute	Upper Flute	Lower Flute	Upper Flute	Lower Flute	
Straight	0.102	3/4	145	160	125	105	260	240	105	105	245	240	2
Tapered	0.120	5/8	120	140	95	80	205	185	100	90	205	200	2

For Sl: 1 lbf = 4.48 N, 1 inch = 25.4mm, 1 psi = 6.895 kPa

- Fasteners must not be driven until the concrete has reached the tabulated compressive strength.
- For straight shank fasteners installed directly into concrete (e.g. top of concrete deck), fastener edge distance must be 3.25 inches minimum and fastener spacing must be 4 inches minimum. Fastener spacing must be a minimum of 4 inches for straight shank fasteners and a minimum of 3.25 inches for tapered shank fasteners.
- The steel deck must have a minimum base material thickness of 0.035 inch, minimum yield strength, F_y, of 33 ksi, minimum tensile strength of 45 ksi and conform to the profile requirements of Figure 1. Fastener edge distance (lower flute locations) must be a minimum of 1-1/8 inches. Fastener spacing must be a minimum of 4 inches for straight shank fasteners and a minimum of 3.25 inches for tapered shank fasteners. Consideration of smaller spacing and edge distances may be given based on application or jobsite testing.
- The steel deck must have a minimum base material thickness of 0.035 inch, minimum yield strength, F_y, of 33 ksi, minimum tensile strength of 45 ksi and conform to the profile requirements of Figure 2. Fasteners may be installed in an inverted deck profile provided the requirements of the fastener installation locations are followed. Fastener edge distance (lower flute locations) must be a minimum of 7/8 inch. Fastener spacing must be a minimum of 4 inches for straight shank fasteners and a minimum of 3.25 inches for tapered shank fasteners. Consideration of smaller spacing and edge distances may be given based on application or jobsite testing.
- Embedment is measured from the surface of the steel deck; the steel deck panel must have a base-metal thickness of 0.030-inch (22 gauge) to 0.048-inch (18 gauge). Consideration for the thickness of the material fastened to the base material must be given to achieve the required embedment for the fasteners.
- The tabulated allowable load values are for the fastener only. Wood or steel members connected to the steel substrate must be investigated in accordance with accepted design criteria.
- Allowable load capacities are calculated using minimum required safety factors in accordance with ICC-ES AC70; the applied safety factor for the tabulated allowable loads is 5.0. Consideration of additional safety factors may be necessary depending on the application such as life safety.
- Multiple fasteners are recommended for any attachment for increased reliability.

Figure 1 - Fastener Installation Through Soffit of 3-inch Deep Concrete-filled Composite Steel Deck Floor and Roof Assemblies

SAND-LIGHTWEIGHT CONCRETE OVER STEEL DECK (MINIMUM 3,000 PSI)

Figure 2 - Fastener Installation Through the Soffit of 1-1/2 inch Deep Concrete-filled Composite Steel Deck Floor and Roof Assemblies

SAND-LIGHTWEIGHT CONCRETE OVER STEEL DECK (MINIMUM 3,000 PSI)

Allowable Loads for CCN Fasteners Driven into Concrete Masonry Units^{1,2,3,4,5,6}

Shank Type	Shank Diameter (inch)	Minimum Embedment (inch)	Minimum Edge Distance (inch)	Hollow CMU				Grouted CMU					
				Face Shell		Mortar Joint		Face Shell		Mortar Joint		Top of Grouted Cell	
				Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)
Straight	0.102	7/8	3-3/4	70	145	55	115	85	110	60	100	140	120
	0.145	3/4	3-3/4	105	65	65	55	-	-	-	-	-	-
Tapered	0.102	5/8	3-3/4	65	45	60	80	60	70	60	80	135	100
			2	65	45	-	-	60	70	-	-	-	-

For SI: 1 lbf = 4.48 N, 1 inch = 25.4mm, 1 psi = 6.895 kPa

- Concrete masonry units must be minimum lightweight units conforming to ASTM C90. The minimum nominal size of the CMU must be 8 inches high by 8 inches wide by 16 inches long, with a minimum 1-1/4 -inch-thick face shell thickness.
- Fasteners must be installed a minimum of 1-1/4 inches from the vertical mortar joints. Allowable loads for fasteners installed in vertical mortar joints is outside the scope of this data.
- For straight shank fasteners, minimum fastener spacing is 4 inches center-to-center. For tapered shank fasteners, minimum fastener spacing is 2 inches center-to-center.
- Shear loads for fasteners installed in the face shell or top of grouted cells can be applied in any direction. Shear direction can be horizontal or vertical along the CMU wall plane.
- The allowable tension and shear values are for the fasteners only. Members connected to the concrete masonry must be investigated in accordance with accepted design criteria.
- Allowable load capacities are calculated using minimum required safety factors in accordance with ICC-ES AC70; the applied safety factor for the tabulated allowable loads is 5.0. Consideration of additional safety factors may be necessary depending on the application such as life safety.

Allowable Loads for CCN Fasteners in Steel^{1,5}

Shank Type	Shank Diameter (inch)	Minimum Spacing (inch)	Minimum Edge Distance (inch)	Allowable Loads In ASTM A36/A1101 Steel						Allowable Loads ASTM A572 Grade 50 or ASTM A992 Steel					
				1/4 ²		3/8 ²		1/2 ^{3,4}		1/4 ²		3/8 ²		1/2 ⁴	
				Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)	Tension (lbs)	Shear (lbs)
Tapered (1/2-inch-long steel pin)	0.120	1	1/2	170	315	165	265	155	220	185	340	165	270	160	230

For SI: 1 lbf = 4.48 N, 1 inch = 25.4mm, 1 psi = 6.895 kPa

- Steel base material must have minimum yield and tensile strengths (F_y and F_u) equal to 36 ksi and 58 ksi, respectively for A36/A1101 steel and equal to 50 ksi and 65 ksi, respectively for A572 Grade 50 or A992 steel.
- Fasteners must be driven to where the full point length of the fastener penetrates through the steel base material.
- Fastener point penetration is not necessary provided a minimum embedment depth of 0.295 inch is achieved.
- Fastener point penetration is not necessary provided a minimum embedment depth of 0.295 inch is achieved. Allowable load value applies to steel base material with thickness of 1/2 inch and greater.
- Allowable load capacities are calculated using minimum required safety factors in accordance with ICC-ES AC70; the applied safety factor for the tabulated allowable loads is 5.0. Consideration of additional safety factors may be necessary depending on the application such as life safety.
- Multiple fasteners are recommended for any attachment for increased reliability.

Allowable Tensile Pull-Over Strengths for Light Gauge Steel Framing with CCN Fasteners^{1,2,3}

Shank Type	Shank Diameter (inch)	Head Diameter (inch)	16 Gauge	18 Gauge	20 Gauge	22 Gauge	25 Gauge
			Allowable (lbs)	Allowable (lbs)	Allowable (lbs)	Allowable (lbs)	Allowable (lbs)
Straight	0.102	0.25	335	270	200	170	120
	0.145	0.25	335	270	200	170	120
Tapered	0.120	0.25	335	270	200	170	120

- Tabulated pull-over strengths were calculated in accordance with ICC-ES AC70 and AISI S100-12. Allowable load values are based on a safety factor of 3.0.
- Allowable pullover capacities of sheet steel or framing member should be compared to the fastener tensile capacity in concrete, masonry or steel to determine the controlling resistance load.
- Sheet steel or framing member with tensile strength of 45 ksi assumed for calculating tabulated values.

DensGlass is a registered trademark of Georgia-Pacific.

K = Knurled

- Fasteners installed into concrete or concrete masonry block must not be driven until the base material has reached the minimum specified compressive strength. Embedment is measured from the surface of the base material to the end of the fastener.
- For fasteners installed into concrete, the member thickness must be a minimum of 3 times the embedment depth of the fastener or 2 inches, whichever is greater.
- For installations into concrete or concrete masonry block, minimum fastener edge and end distance is 3-3/4 inches; minimum fastener spacing is 4 inches center-to-center.
- For installations into concrete masonry block, fasteners may be installed into the face shell or horizontal mortar joint. The face shell thickness of hollow concrete masonry block must be 1-1/4 inch minimum. Fasteners must be installed a minimum of 1-1/4 inch from the vertical mortar joints; allowable loads for fasteners installed in vertical mortar joints is outside the scope of this data.
- Allowable load capacities for concrete are based on a minimum concrete compressive strength of 3000 psi; allowable load capacities in concrete may be increased by 15 percent for installations into 4000 psi concrete and allowable load capacities must be reduced by 10 percent for installations into 2500 psi concrete. Allowable load capacities for concrete masonry block are based on a minimum masonry compressive strength of 2000 psi.
- Allowable load capacities for concrete and concrete masonry block are calculated using minimum required safety factors in accordance with ICC-ES AC70; the applied safety factor for the tabulated allowable loads is 5.0. Consideration of additional safety factors may be necessary depending on application such as life safety.
- Allowable loads for light gauge steel framing are calculated using minimum required safety factors in accordance ICC-ES AC259 using light gauge steel framed panels sheathed with DensGlass; the applied safety factor for the tabulated allowable loads is 3.0. Light gauge steel framing members must be minimum 18 gauge thickness. Allowable negative (outward) transverse pressure on the panels must not exceed 15 psf for the specified sheathing thickness, maximum steel stud spacing and fastener spacing. Consideration of additional safety factors may be necessary depending on the applicable design method and/or the application such as life safety. Wood members and/or other proprietary materials connected to the light gauge steel substrate must be investigated for compliance with the applicable codes.
- Multiple fasteners are recommended for any attachment for increased reliability.

ORDERING INFORMATION

CCN Concrete Fasteners

Cat. No.	Shank Dia. in.	Length in.	Finish	Typical Applications	Box	Ctn.
DCN890075	0.102	3/4	Zinc	Metal track to concrete	1000	6
