THE SAFEST WAY TO GET HIGH

When it comes to dropped objects prevention, luck is bad policy. Gravity's a relentless little rascal and "never happened before" has nothing to do with tomorrow. Drops WILL happen. The damage they cause is up to you.

If a tethering solution doesn't meet the standards of ANSI/ISEA 121-2018, it has no business on the jobsite. Find confidence in compliance with Squids® Tool Tethering Systems.

Maybe you don't need the full-on safety smorgasbord of our Trades Tethering Kits. NBD. Help yourself to our a la carte kit offering of individual, tool-specific tethering kits.
